

Dedicated Internet Access

MetroFibre's carrier ethernet network forms the basis of our internet, voice and cloud services to small, medium and large organisations.

By delivering some of the fastest speeds and most reliable connectivity available today, our carrier ethernet 3.0 network will ensure you have the foundation required to get things done quickly and reliably. MetroFibre's metro and access routes are designed to provide carrier class connectivity to as many end users as possible. The core ring is continuously growing as customer and SP demands are taken into consideration for extended network coverage.

Quality & service assurance

As the proud owners and operators of South Africa's first globally compliant Carrier Ethernet 3.0 (CE 3.0) open-access fibre network, MetroFibre ensures improved access, scalability and reliability for our clients. Our network provides you with the ability to connect to over 60 cloud, application, voice and internet service providers (ISPs) to directly benefit your business. Through strategic partnerships and relationships with major DC operators, we also provide direct links to leading cloud operators such as Microsoft Azure, AWS and Google.

Ideal for

- Businesses looking for a premium & low latency internet service
- Access to cloud services
- Real-time applications such as voice and video
- SD-WAN deployment
- Established companies looking to further grow and expand their business with a trusted provider
- Small ISPs / Resellers
- Businesses looking for high availability and uptime
- Large organizations and Financial institutions

Speed of delivery

Businesses located within MetroFibre pre-fibred parks or suburbs can get connected to our network within two to three weeks. Switch to one of the fastest and most reliable networks in South Africa in no time.
